# BROAD SPECTRUM CBD

Lebermuth's broad spectrum hemp extract is refined and formulated to meet industry standards. We offer a customizable broad spectrum product with ranges of minimum 50% up to a maximum of 94% CBD with 0% THC. All terpenes, cannabinoids, flavonoids, proteins and phenolics are left intact for an increased "entourage effect".

## CBD ENCOMPASSES THREE COMMERCIAL VARIATIONS:

**ISOLATE:** Single molecule isolated from the cannabis plant and void of all other cannabis-based compounds

**BROAD SPECTRUM:** Just like Full Spectrum, it contains CBD with all other compounds that create the "Entourage Effect", however it is void any/all THC

**FULL SPECTRUM:** CBD oil extracted from a hemp plant, along with, terpenes, cannabinoids, phenolics, flavonoids & fatty acids which creates the "Entourage Effect". Contains traces of THC no greater than 0.3%

---

## ENTOURAGE EFFECT DEFINED:

A proposed mechanism by which cannabis compounds act synergistically to modulate the overall psychoactive effects of the plant, primarily by the action of THC.
